DETAILED ACTION

Continued Prosecution Application

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on July 26, 2006 has been entered.

Allowable Subject Matter

2. Claims 9-15 are allowed, respectively renumbered as Claims 1-7.
3. The following is a statement of reasons for the indication of allowable subject matter:

In regard to Claims 9, 12, and 13 the prior art of record, Ando et al (US 6556772), discloses method of addressing pieces of the bit stream to be recorded on a storage medium. Furthermore, information assigned to the pieces of the bit stream allow for the user to determine information about what is stored on the recording medium as further discussed in seen in Figures 32-33 and discussed in Column 41 Lines 19-50; however, the prior art of record fails to teach, suggest or partly disclose an apparatus in combination of the above apparatus comprising an address table entry for said pieces a delta time duration value is assigned in the said address table, wherein

the delta time duration is the difference between the arrival time of the data packet following immediately the last data packet.

Additionally, Tozaki et al (EP 0 797 204) discloses a recording method and apparatus wherein access information is divided into data groups that are used to manage and access the information for the recording medium. Furthermore, the management information is available in cell information table, Figure 6, wherein it is determined whether or not two addresses are indicated to be apart from each other by one time unit by the time unit address information; however, the prior art of record fails to teach, suggest, or partly disclose an apparatus in combination with the above apparatus wherein an address table entry for said pieces of a delta time duration, which is recited in applicant's Claims 12, and 13.

Furthermore, Hirabayashi et al (EP 0 729 153) discloses a recording method and apparatus wherein data tables are used to access information regarding the data stream for trick play purposes. It is shown in Figures 1-5 tables that provide information pertaining to sector addresses, time codes, and content wherein all of the sector addresses are recorded and thereby lacking an address table that records the delta time duration value regarding the recorded information. Therefore, it is seen the prior art of record fails to teach, suggest, or partly disclose an apparatus in combination comprising:

“Method for addressing pieces of a bit stream to be recorded or being recorded on a storage medium, wherein an address table is used to assign time information to said pieces and wherein each of said pieces include a constant number of bits wherein: said

*pieces contain data packets **to each address table entry for said pieces a delta time duration value is assigned in said address table, wherein such delta time duration value is the difference between the arrival time of the first data packet of a piece and the arrival time of the data packet following immediately the last data packet.***

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
